PROFESSIONAL SUMMARY

Data Scientist & Full-Stack AI Developer with 2+ years of experience building end-to-end data and AI-driven applications in a startup environment. Skilled in **Python, Machine Learning, NLP, ReactJS**, and cloud-based data systems. Experienced in transforming raw data into scalable products using **Streamlit, Flask**, and modern frontend frameworks. Strong focus on real-world problem solving, automation, and business-impact analytics.

PROFESSIONAL EXPERIENCE

Data Scientist / Full-Stack AI Developer | Einsteinium Labs

June 2024 – Present

- Designed and developed end-to-end AI-powered applications combining data science, backend APIs, and frontend interfaces.
- Built and optimized machine learning models for classification and forecasting, improving decision-making accuracy for internal teams.
- Developed ETL pipelines to clean, process, and store large datasets using SQL, AWS S3, Redshift, and Google BigQuery.
- Created interactive dashboards and AI tools using Streamlit and Power BI for business stakeholders.
- Implemented NLP-based systems for resume parsing, skill matching, and automated candidate screening.
- Collaborated with product managers and engineers to convert business requirements into scalable AI solutions.
- Worked in a fast-paced startup environment, handling both data engineering and application development responsibilities.

SKILLS

Machine Learning & AI: Machine Learning, Predictive Modeling, Classification, Regression, NLP (SpaCy, NLTK), EDA, Statistical Analysis

Programming & Frameworks: Python, SQL, JavaScript, Flask, Streamlit, ReactJS

Data & Cloud: Pandas, NumPy, AWS (S3, EC2, Redshift), Google BigQuery, MongoDB, SQL Databases

Visualization & Tools: Power BI, Tableau, Matplotlib, Plotly, Git, REST APIs, JWT

PROJECTS

AI-Powered Resume Screening Platform

- Built a full-stack AI system to automate candidate screening for recruiters.
- Implemented NLP-based resume parsing and skill matching.
- Developed role-based access control for HRs, recruiters, and applicants.

Tech Stack: ReactJS, Flask, MongoDB, Python, SpaCy, NLTK

Predictive Analytics for Business Forecasting

- Developed ML models to forecast business trends and demand patterns.
- Performed EDA to identify key business drivers and actionable insights.
- Deployed the solution as an interactive Streamlit application.

Tech Stack: Python, scikit-learn, Pandas, SQL, Streamlit, AWS S3

Automated Data Visualization & Reporting System

- Built dashboards for real-time tracking of business metrics.
- Integrated data from databases, APIs, and CSV files for unified reporting.
- Delivered business insights using Power BI, Tableau, and Streamlit.

Tech Stack: Power BI, Tableau, Python, SQL, Plotly

Data Warehousing & ETL Pipeline

- Designed scalable ETL pipelines for structured and unstructured data processing.
- Optimized data storage and query performance using AWS Redshift and BigQuery.
- Improved data processing speed significantly using Apache Spark.

Tech Stack: *SQL, Python, Apache Spark, AWS Redshift, Google BigQuery*

EDUCATION

Bachelor of Computer Applications (BCA)

2019 – 2022

Sri Harshini Degree College, Ongole | Information Technology | CGPA: **6.5**

CERTIFICATIONS

- SQL and Relational Databases – IBM SkillsBuild | 2024
- Data Science with Python - IBM SkillsBuild | 2024
- AI Associate – Salesforce | 2024
